# Refresher Math Course

Paul Dubois

September 2021

#### Abstract

This course teaches basic mathematical methodologies for proofs. It is intended for students with a lack of mathematical background, or with a lack of confidence in mathematics. The course will try to cover most of the prerequisites of the courses in the Master, mainly linear algebra, differential calculus, integration, and asymptotic analysis.

# Contents

	Sets & lo		
		ematical Objects & Notations	
		ean algebra	
	1.3 Pyth	on	
2 1	Proofs methods		
	2.0.1	Direct implication	
	2.0.2	Case dis-junction	
	2.0.3	Contradiction	
	2.0.4	Induction	
		Existence and Uniqueness	

### Introduction

#### Presentation

- Paul Dubois
- will be teaching this refresher math course
- email (for any question), answer within 1 working day

#### **Course Format**

#### Lectures

- 8\*3h
- 1h20min lecture 1/3h break 1h20min lecture
- No pb class planned, but lectures will have integrated live exercises
- Interrupt if needed (but may also ask at the end of the lecture)
- Lectures are recorded (if ever needed)
- 1st lecture ever => too fast/too slow: let me know
- May assume you know a concept/notation that you have never heard of, let me know if this happens

#### Examination

- The course is pass/fail
- Most (in fact hopefully all) of you will pass
- There will be a full exercise sheet per lecture, it is advised to attempt it all (only one will be compulsory).
- Hand-in 1 exercise per lecture (i.e., 8 in total), due 2 weeks after the lecture
- Best (n-1)/n count (i.e., best 7/8 in our case), need avg  $\geq 50\%$  to pass
- In the unlikely event of not passing, will be able to do an extra work

#### Questions?

# Chapter 1

# Sets & logic

## 1.1 Mathematical Objects & Notations

#### Sets

**Definition** (Sets). Unordered list of elements.

Notation (Sets).  $\in$ , {True, False}, {a | condition}, {a, b, c...},  $\emptyset$ 

Need to be careful when defining set: some definitions are pathological.

**Remark** (Russell Paradox). Take  $U = \{X \mid X \notin X\}$ . X in U => U not in U, U is a set, so not all sets are in UX not in U => X is a set

Notation (Usual Sets).  $\mathbb{B}$ ,  $\mathbb{N}$ ,  $\mathbb{Z}$ ,  $\mathbb{Q}$ ,  $\mathbb{R}$ ,  $\mathbb{C}$ ,  $\mathbb{N}^*$ ,  $\mathbb{R}^+$ ...

#### **Functions**

**Definition** (Functions). Assignment for a set to another.

**Notation** (Function).  $f: X \to Y$ , f(x) = blah,  $f: x \mapsto blah$ .

**Definition** (Predicate). Function to  $\mathbb{B}$ 

Question. Which ones of these function are well-defined?

- $f: k \in \{0, 1, 2, 3, 4\} \mapsto 24/k \in \mathbb{N}$
- $f: k \in \{1, 2, 3, 4\} \mapsto 24/k \in \mathbb{N}$
- $f: k \in \{1, 2, 3, 4, 5\} \mapsto 24/k \in \mathbb{N}$
- $f: k \in \{1, 2, 3, 4\} \mapsto k \in \{1, 2\}$
- $f: k \in \{1, 2, 3, 4\} \mapsto k \in \{1, 2, 3, 4, 5\}$

#### Quantifiers

**Notation** ( $\forall$ ). For all elements in set, e.g.:  $\forall x \in \mathbb{R}, x^2 \geq 0$ .

**Notation** ( $\exists$ ). There exists an element in set, e.g.:  $\exists x \in \mathbb{R}$  s.t.  $x^2 > 1$ .

**Notation** ( $\exists$ !). There exists a unique element in set, e.g.:  $\exists$ ! $x \in \mathbb{R}$  s.t.  $x^2 \leq 0$ .

**Definition** (Subset / Inclusion).  $X \subseteq Y$  if  $\forall x \in X, x \in Y$ 

**Definition** (Powerset).  $\mathcal{P}(X) = \{Y \mid Y \subseteq X\}$ 

$$\textit{e.g.: } \mathcal{P}(\{1,2,3\}) = \{\emptyset,\{1\},\{2\},\{3\},\{1,2\},\{1,3\},\{2,3\},\{1,2,3\}\}$$

**Definition** (Cartesian Product).  $X \times Y = \{(x, y) \mid x \in X, y \in Y\}$ 

e.g.:  $\{a,b\} \times \{1,2,3\} = \{(a,1),(a,2),(a,3),(b,1),(b,2),(b,3)\}$ 

Extension:  $X_1 \times \cdots \times X_n = \prod_{k=1}^n X_k$ 

## 1.2 Boolean algebra

#### Basic operators

**Definition** (Conjonction).  $x \wedge y = xy$ 

**Definition** (Intersection).  $X \cap Y = \{z \mid (z \in X) \land (z \in Y)\}$ 

**Definition** (Disjunction).  $x \lor y = \min(x + y, 1)$ 

**Definition** (Union).  $X \cup Y = \{z \mid (z \in X) \lor (z \in Y)\}$ 

**Definition** (Negation).  $\neg: 0, 1 \mapsto 1, 0$ 

**Definition** (Set minus / Complement).  $X \setminus Y = \{x \in X \mid \neg(x \in Y)\}$ 

Question. Selecting points outside a given region.

#### Basic properties

**Property 1.1** (Boolean algebra matching ordinary algebra). Same laws as ordinary algebra when one matches up  $\vee$  with addition and  $\wedge$  with multiplication.

- Associativity of  $\vee$ :  $x \vee (y \vee z) = (x \vee y) \vee z$
- Associativity of  $\wedge$ :  $x \wedge (y \wedge z) = (x \wedge y) \wedge z$
- Commutativity of  $\vee$ :  $x \vee y = y \vee x$
- Commutativity of  $\wedge$ :  $x \wedge y = y \wedge x$
- Distributivity of  $\wedge$  over  $\vee$ :  $x \wedge (y \vee z) = (x \wedge y) \vee (x \wedge z)$
- 0 is identity for  $\vee$ :  $x \vee 0 = x$
- 1 is identity for  $\wedge$ :  $x \wedge 1 = x$
- 0 is annihilator for  $\wedge$ :  $x \wedge 0 = 0$

**Property 1.2** (Boolean algebra specific properties). The following laws hold in Boolean algebra, but not in ordinary algebra:

- $Idempotence\ of\ \lor:\ x\lor x=x$
- Idempotence of  $\wedge$ :  $x \wedge x = x$
- Absorption of  $\vee$  over  $\wedge$ :  $x \vee (x \wedge y) = x \wedge y$
- Absorption of  $\land$  over  $\lor$ :  $x \land (x \lor y) = x \lor y$
- Distributivity of  $\vee$  over  $\wedge$ :  $x \vee (y \wedge z) = (x \vee y) \wedge (x \vee z)$
- 1 is annihilator for  $\vee$ :  $x \vee 1 = 1$

**Property 1.3** (De Morgan Laws).  $\neg(x \land y) = \neg x \lor \neg y \neg(x \lor y) = \neg x \land \neg y$ 

*Proof.* Truth-tables; prove De Morgan, others as exercise (or just believe me)

### Other operators

**Definition** (Exclusive Or).  $x \oplus y$ 

**Definition** (Implication).  $x \implies y$ 

**Property 1.4** (Implication and Inclusion). If  $\forall x \in X, P_1(x) \implies P_2(x)$ , then  $\{x \in X \mid P_1(x)\} \subset \{x \in X \mid P_2(x)\}$ .

**Definition** (If and only if).  $x \iff y$ 

### Negation of quantified propositions

**Property 1.5** (Negation of  $\forall$ ).  $not(\forall x \in X, P(x)) = \exists x \in X, not(P(x))$ 

**Property 1.6** (Negation of  $\exists$ ).  $not(\exists x \in X, P(x)) = \exists x \in X, not(P(x))$ 

**Notation** (Quantifiers and the empty set).  $\forall x \in \emptyset$ , ... is true;  $\exists x \in \emptyset$ , ... is false

## 1.3 Python

=> use google colab'

# Chapter 2

# Proofs methods

### 2.0.1 Direct implication

Want to show A: may show B and  $B \implies A$ , or C and  $C \implies B$  and  $B \implies A$ .

### 2.0.2 Case dis-junction

Split in cases.

E.g.: show n and  $n^2$  have the same parity (take n odd then n even).

#### 2.0.3 Contradiction

Suppose the opposite, derive a contradiction (i.e. A and A) and conclude. E.g.: show  $\sqrt{2} \notin \mathbb{Q}$  (suppose  $\sqrt{2} = a/b$ , WLOG  $a, b \in \mathbb{N}$  co-prime).

#### 2.0.4 Induction

Want to show  $P_n$  for  $n \ge n_0$ : show  $P_n \implies P_{n+1}$  and  $P_{n_0}$ . E.g.: show  $\sum_{k=0}^n k = \frac{n(n+1)}{2}$  for all  $n \in \mathbb{N}$ .

#### 2.0.5 Existence and Uniqueness

It is common to show existence and/or uniqueness.

E.g.: Existence and uniqueness in Euclidean division:

$$\forall a \in \mathbb{Z}, b \in \mathbb{N}^*, \exists ! \ q \in \mathbb{Z}, r \in [0, b] \cap \mathbb{N} \text{ s.t. } a = bq + r$$

Use  $q = \max\{k \in \mathbb{N} \mid bk \le a\}, r = a - bq$ .

# Chapter 3

# **Functions Properties**

$$f: X \to Y \quad A \subseteq X, B \subseteq Y$$

**Definition** (Image).  $f(A) = \{ y \in Y \mid \exists x \in A \text{ s.t. } f(x) = y \}$ 

**Definition** (Inverse Image).  $f^{-1}(B) = \{x \in X \mid f(x) \in B\}$ 

**Definition** (Fiber). Fiber of y is inverse image of  $\{y\}$ .

**Definition** (Well definedness).  $\forall x \in X, \exists ! y \in Y \ s.t. \ f(x) = y$ 

**Definition** (Injectivity).  $\forall x, x' \in X, x \neq x', f(x) \neq f(x')$ 

**Definition** (Surjectivity).  $\forall y \in Y, \exists x \in X \ s.t. \ f(x) = y$ 

**Definition** (Bijectivity). Injectivity plus Surjectivity:  $\forall y \in Y, \exists ! x \in X \text{ s.t. } f(x) = y$ 

**Definition** (Invertibility).  $f^{-1}: Y \to X$  well defined.

**Remark** (Alternative Definition of Inverse).  $f \circ f^{-1} = Id \mid_X and f^{-1} \circ f = Id \mid_Y$ 

**Remark** (Invertibility and Bijectivity). f bijective  $\iff$  f invertible.

**Remark** (Inverse is Invertible).  $f^{-1}$  is invertible, and  $(f^{-1})^{-1} = f$ .

**Property 3.1** (Injection between finite intervals).  $n, p \in \mathbb{N}^*$ , there exists an injection  $f : [1; n] \to [1; p]$  if and only if  $n \leq p$ .
